EDUCATION

Rutgers, The State University of New Jersey *New Brunswick, NJ* May 2026
Bachelor of Science, Business Analytics & Information Technology — *Cum Laude* GPA 3.6/4.0

WORK EXPERIENCE

Apple, Inc *Cupertino, CA*

Software Engineer Intern, Face ID Process Automation June 2026 – Present

- Own an automated CI stage that replays recorded sessions through the Face ID algorithm (enroll → unlock) on every pull request (90+ builds/week), catching behavior changes a compile check misses without blocking merges.
- Partner with Claude Code as an engineering multiplier to debug CI runs, triage verbose logs, review and write Python and Shell scripts, and build reusable skills for my workflow, verifying every output against real test runs.
- Expand replay testing to three hardware configurations: record and grade 57 positive and negative test cases with 22 running in CI on every pull request.
- Write 8 Python checks that read log fields to verify why an outcome happens, not just pass/fail, reading the source to confirm what each signal means before asserting on it.
- Find and complete BioLog converter support for the IR-only device by fixing an inverted check in the C++ and verifying the conversion on 7 real captures, which unblocks CI coverage for that hardware.
- Write Python and Shell/Bash scripts that classify outcomes from diagnostic logs into automated pass/fail with archived output, replacing manual log review; add retry with backoff for flaky test-data downloads.

Technical Specialist *Edison, NJ* August 2025 – Present

- Troubleshoot hardware and software issues for 50+ customers per week across iOS, watchOS, tvOS, and visionOS, with a 92% customer satisfaction rate and a 100% same-unit repair rate (SUR), exceeding performance expectations for the full year.
- Complete 4.6 appointments per hour while maintaining quality, staying fast and efficient during high-traffic periods and multiple concurrent reservations.
- Use diagnostic tools to identify recurring issues and build workflows that speed up resolution; support product launches, translate technical concepts into clear guidance, and quickly adopt new AI-driven tools.

Product Specialist August 2024 – August 2025

- Track user interactions in CRM platforms and adjust recommendations from data insights, delivering product demonstrations that clarify features and contribute to increased feature adoption.
- Attach AppleCare to 75% of eligible customer visits, pairing the right plan with each customer's device and needs.

Prime Shipping, LLC *Hillside, NJ* December 2023 – August 2024

Business Operations & Data Intern

- Manage 100+ invoices and inventory entries in Excel (VLOOKUPs, pivot tables) and Power BI and review shipping logs for discrepancies, keeping datasets clean and improving inventory accuracy for logistics teams.

PROJECTS

Selenium + TestNG UI Test Framework github.com/kayla-damoah/selenium-testng-framework

- Build a Java 17 browser test suite (Selenium, TestNG, Maven) with the Page Object Model and data-driven tests, run headless on every push in GitHub Actions with a published Allure report.
- Raise CI from 9 to 12 of 12 passing over six rounds by reading logs and failure screenshots to find that the demo site silently drops input, then making each click and keystroke verify its own result and retry.

Playwright + pytest Test Framework github.com/kayla-damoah/playwright-pytest-framework

- Build a Python framework with pytest and Playwright covering 12 browser tests and 10 REST API tests, using page objects, fixtures, and markers to select subsets, and keep a screenshot and trace of every failed UI test.

Athletic Equipment Inventory Optimization github.com/kayla-damoah/track-inventory-optimization

- Build a Python projection model and interactive dashboard for Rutgers Track & Field, estimating about $8.3K in annual savings and 40% fewer emergency orders from the team's baseline budget and labeled assumptions (19% bulk discount).

SKILLS

Test & Automation: Test automation framework design, Selenium, Playwright, pytest, TestNG, REST API testing, CI/CD (Jenkins, GitHub Actions), test plan authoring, failure triage and root cause isolation, log analysis
Languages & Tools: Python, Java, C++, Shell/Bash, SQL, R, Xcode, Git, Agentic AI tooling (Claude Code)
Data & ML: On-device ML and sensor algorithm evaluation, predictive modeling, statistical analysis, Power BI, Excel
Certifications: Google Python Automation Professional Certificate

LEADERSHIP EXPERIENCE

Scarlet Divas Executive Board — *Secretary and Treasurer* August 2024 – May 2026
TWESE Executive Board — *Secretary* August 2024 – May 2026
Rutgers Track & Field — *Manager* September 2024 – December 2025
